

**M.Sc. CHEMISTRY**  
**First Semester (Repeat)**  
**INORGANIC CHEMISTRY-I**  
**(MSC - 102)**

**Duration: 3Hrs.**

**Full Marks: 70**

Part-A (Objective) =20  
Part-B (Descriptive) =50

**(PART-B: Descriptive)**

**Duration: 2 hrs. 40 mins.**

**Marks: 50**

**Answer any four from Question no. 2 to 8**  
**Question no. 1 is compulsory.**

1. State selection rules for electronic transitions. Why dilute solutions of Mn(II) are colourless? What is an Orgel diagram? How Orgel diagram is different from correlation diagram? What is the atomic term symbol for He atom ( $1s^2$ )?  
(2+2+2+2+2=10)
2. Write short notes on: (any 2) (5×2=10)
  - a) Green house effect
  - b) Acid Rain
  - c) Ozone layer depletion
3. What are bonding and antibonding molecular orbitals? Draw molecular orbital energy level diagram for oxygen molecule and discuss its properties. What is the type of highest occupied molecular orbital of HF? (3+5+2=10)
4. What is CFSE? Calculate CFSE for a high spin  $d^4$  case. Why the crystal field splitting in a  $T_d$  field is smaller than in an  $O_h$  field? Briefly state the factors that affect the extent to which metal  $d$  orbitals are split by surrounding ligands.  
(2+2+2+4=10)

5. Following are the conclusion of observation of electronic spectra of  $[\text{Co}(\text{en})_3]^{3+}$ , *cis*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  and *trans*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  solutions. Make assignments of the bands and explain the observations-
- Spectra of  $[\text{Co}(\text{en})_3]^{3+}$  and *cis*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  shows two bands only but *trans*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  shows three bands.
  - cis*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  and *trans*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  shows bands at lower energy.
  - Intensity of the peak of *trans*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  is less than *cis*-  $[\text{Co}(\text{en})_2\text{F}_2]^+$  complex. (4+3+3=10)
6. (a) Define electronegativity. Explain different electronegativity scale for determination electronegativity value.
- (b) Explain on the basis of molecular orbital theory for hetero nuclear diatomic molecule CO and NO. (5×2=10)
7. (a) Discuss about synthesis, structure and bonding involved in diborane.
- (b) What are oxo-acids of halogen? Write the general properties and trends of oxoacids.
- (c) What are pseudohalides and pseudohalogens? (5+3+2=10)
8. (a) The electronic spectrum of  $[\text{V}(\text{H}_2\text{O})_6]^{3+}$  exhibits two absorption bands at 17,800 ( $\gamma_1$ ) and 25,700 ( $\gamma_2$ )  $\text{cm}^{-1}$ . Find out the correct assignments for these transitions. (5)
- (b) Explain why  $\text{Co}_3\text{O}_4$  exists as normal spinel structure but  $\text{Fe}_3\text{O}_4$  as inverse spinel structure on the basis of CFT. (5)

**M.Sc. CHEMISTRY**  
**First Semester (Repeat)**  
**INORGANIC CHEMISTRY-I**  
**(MSC - 102)**

Duration: 20 minutes

Marks – 20

**(PART A - Objective Type)**

**I. Choose the correct answer:****1×10=10**

- Which of the following *correctly* places the ligands in their order in the spectrochemical series?  
a)  $F^- < Cl^- < NH_3 < H_2O$     b)  $Br^- < Cl^- < H_2O < NH_3$   
c)  $CO < I^- < en < py$         d)  $ox < urea < H_2O < OH$
- According to VSEPR theory to predict molecular shape, which of the following we do not need to take into account?  
a) Valence electrons occupying sigma bonding orbitals.  
b) Valence electrons occupying pi bonding orbitals.  
c) Valence electrons occupying non-bonding orbitals.  
d) All of above.
- How many microstates are possible for a  $d^2$  configuration, including both weak and strong field limits?  
a) 2            b) 15            c) 30            d) 45
- The kind of geometry adopted by atoms in a molecule of water is?  
a) Tetrahedral            b) Octahedral  
c) Linear                  d) V-shaped
- The number of molecular orbitals that may be constructed from the valence shell orbitals of the constituent atoms in  $CH_4$  are?  
a) 2            b) 4            c) 6            d) 8
- The symmetry of the antibonding molecular orbital formed by a linear combination of the  $p_x$  or  $p_y$  atomic orbitals in a homonuclear diatomic molecule is?  
a)  $\pi_g$             b)  $\sigma_g$             c)  $\pi_u$             d)  $\sigma_u$
- Zeise's salt is  
a)  $H_2PtCl_6$                   b)  $[PtCl_4]^{2-}$   
c)  $[PtCl_3(C_2O_4)]^-$         d)  $[ZnCl_4]^{2-}$
- Which metal complex ion is expected to be subject to a Jahn-Teller distortion?  
a)  $[Cr(NH_3)_6]^{2+}$             b)  $[Cr(bpy)_3]^{2+}$   
c)  $[Cr(H_2O)_6]^{3+}$             d)  $[Cr(CN)_6]^{3-}$

9. A  $d^1$  electron configuration corresponds to which of the following terms?

- a)
- $^3D$
- b)
- $^4D$
- c)
- $^5D$
- d)
- $^2D$

10.  $[Ni(CN)_4]^{2-}$  and  $[NiCl_4]^{2-}$  complex ions are

- a) diamagnetic and paramagnetic respectively
- 
- b) paramagnetic and diamagnetic respectively
- 
- c) both diamagnetic
- 
- d) both paramagnetic

**II. State true or false:****1×5=5**

- Like halogens, pseudohalogens are oxidizing agents.
- $ICl_7$  does not exist.
- Orthoboric acid is also called as "boric acid."
- The intense colour of  $KMnO_4$  is due to  $d-d$  transition.
- Interhalogens are less reactive than halogens.

**III. Fill in the blanks:****1×5=5**

- Unit for noise pollution level is.....
- PAN stands for.....
- The second most influential green house gas is.....
- The Bhopal Gas Tragedy was due to emission of.....
- CO acts as a poison for human due to formation of.....

\*\*\*\*\*
