

**B.Sc. CHEMISTRY
FOURTH SEMESTER
ORGANIC CHEMISTRY-III
BSC – 941 IDM.J
[USE OMR FOR OBJECTIVE PART]**

**SET
A**

Duration: 3 hrs.

Full Marks: 70

Time: 30 min.

(Objective)

Marks: 20

1×20=20

Choose the correct answer from the following:

1. If acetaldehyde is treated with CH_3MgBr and the product is hydrolysed then which of the following products is obtained?
a. Ethanol
b. Propan-1-ol
c. Propan-2-ol
d. 2-methylpropan-2-ol
2. If vapours of propan-2-ol is passed over red-hot Cu at 300°C the product obtained is
a. Propanone
b. Butanone
c. Propane
d. Propene
3. The name of the following reaction is

- a. Kolbe's Schmidt reaction
b. Reimer Tiemann reaction
c. Fries rearrangement
d. Claisen rearrangement
4. The product P in the following reaction is

5. If ethene is treated with cold, dilute and alkaline KMnO_4 solution, the product obtained is
 - a. Ethyl alcohol
 - b. Ethylene glycol
 - c. Acetaldehyde
 - d. Acetone
6. Primary alcohol upon over oxidation will be converted to
 - a. Ketone
 - b. Ester
 - c. Aldehyde
 - d. Carbohydrate
7. Ozonolysis of ethylene under the treatment of H_2O_2 will be generating
 - a. Ethanoic acid
 - b. Formic acid
 - c. Formaldehyde
 - d. Acetaldehyde
8. The reaction between acetone and hydroxyl amine gives a
 - a. Hydrazone
 - b. Semicarbazone
 - c. Ketoxime
 - d. Aldoxime
9. The aldehyde that reacts and gives most stable compound with water is
 - a. CH_3CHO
 - b. CCl_3CHO
 - c. PhCHO
 - d. Cl_3CHO
10. Benzaldehyde when undergoes Cannizzaro reaction produces
 - a. Benzoic acid only
 - b. Benzyl alcohol only
 - c. Toluene
 - d. both Benzyl alcohol & Benzoic acid
11. Which is a not a correct statement for an $\text{S}_\text{N}1$ reaction?
 - a. Proceed with inversion of configuration
 - b. weak nucleophile will favour the reaction.
 - c. proceed with formation an intermediate.
 - d. polar protic solvent favour the mechanism.
12. A and B in the following sequence of reactions are respectively

$$\text{ROH} \xrightarrow{\text{PBr}_3} \text{A} \xrightarrow{\text{AgCN}} \text{B}$$
 - a. RBr and RCN
 - b. RBr and RNC
 - c. ROBr and RNC
 - d. ROBr and RCN
13. For preparation of any s-alcohol using Grignard reagent (GR), need
 - a. $\text{GR} + \text{HCHO}$
 - b. $\text{GR} + \text{RCHO}$
 - c. $\text{GR} + \text{Ketone}$
 - d. $\text{GR} + \text{H}_2\text{O}$

14. The product C in the following sequence of reactions is

- a. $\text{CH}_3\text{CH}_2\text{CH}_2\text{OH}$ b. $\text{CH}_3\text{CH}_2\text{CHO}$
c. $\text{CH}_3\text{CH}_2\text{COOH}$ d. CH_3CH_3

15. The product in the following elimination reaction is following

- a. Sayetzev rule b. Hoffman's rule
c. Bredt's rule d. Markownikoff's rule

16. Write down the correct product of the following reaction

- a. b.
c. d.

17. Which structure is the correct structure of 2-Methylpentanoic acid is

- a. b.
c. d.

18. Naphthalene has

- a. 2 α and 4 β position b. 4 α and 2 β position
c. 4 α and 4 β position d. 2 α and 2 β position

19. The product of the following reaction is

- a.
- b.
- c.
- d.

20. Phenanthrene is

- a. A polyaromatic hydrocarbon
- b. Composed of three fused benzene rings
- c. A non-linear aromatic system
- d. All of the above

(**Descriptive**)

Time : 2 hrs. 30 mins.

Marks : 50

[Answer question no.1 & any four (4) from the rest]

1. a. Write down the products A and B of the following reaction

3+2+3+2
=10

- b. The ambident nucleophile among RNH_2 , CN^- , RSH , AlCl_3 , CH_2COR & NO_2^- is/are
- c. What is Bouveault Blanc reduction? Give its mechanism.
- d. Discuss the general condensation reaction of carbonyl compound

2+2+6
=10

2. a. What are the products (A and B) of the following reaction

b. γ -position in phenanthrene is favoured by electrophile as compared to that of α and β position: Explain on the basis of resonance energy.

c. Write down the product, A and B for the following reaction:

2+3+3+2
=10

3. a. Starting from CH_3MgBr how will prepare the following? i) Propan-1-ol and ii) Propan-2-ol

b. What are phenols? Give reason why phenols are acidic.

c. Discuss the mechanism of the following reaction.

d. How will you distinguish between 1° and 2° alcohols by Lucas test? Explain.

4. a. Give the conversions of the following:

2+3+5
=10

- Ethene to ethylene glycol and
- Ethylene glycol to dioxane

b. What are epoxides? Write the products in the following reactions.

c. Arrange the following compounds in order of their increasing acid strength

- CH_3COOH , CF_3COOH , CCl_3COOH , CBr_3COOH
- HCOOH , CH_3COOH , $\text{C}_2\text{H}_5\text{COOH}$

d. What will be the product of the following reactions

5. a. If a secondary alcohol is treated with $\text{K}_2\text{Cr}_2\text{O}_7$ in the presence of dilute H_2SO_4 what product will be formed? Show the mechanism.

4+2+4
=10

b. Write the structure of the products(A&B) of the following reactions.

c. Write a short note on ozonolysis reaction.

6. a. What is DIBAL-H? Identify the product 'A' of the following reaction your answer.

5+3+2
=10

- b. Discuss the Friedel Crafts acylation reaction.
c. How to make a ketone from organic nitrile?
7. a. How can you prepare the following alkyl halide from an appropriate starting material $\text{CH}_3\text{CH}_2\text{CH}_2\text{-Br}$
b. Discuss mechanism and kinetics of a general $\text{S}_\text{N}1$ reaction. Indicate the energy profile of the reaction.
c. "A strong nucleophile favours $\text{S}_\text{N}2$ mechanism and weak nucleophile favours an $\text{S}_\text{N}1$ mechanism." Justify the statement.
d. Write down the possible product/s in the following reaction:

2+3+3+2
=10

8. a. Write down the product / products formed in the following reaction with mechanism.

3+3+4
=10

- b. Write down the products A, B and C in the following sequence of reactions

c. Write down the products formed in the following reactions.

= = *** = =
